## **Education**

### **University of Brighton – Research Program (IoT Security and Privacy)**

Brighton, United Kingdom 2018 – 2021

A Security and Privacy IoT research at Centre for Secure, Intelligent and Usable Systems on areas of:

- Security and Privacy Requirements Engineering, Model-Based Security Engineering
- IoT, 5G and Cloud Computing Security, Security Attack and Threat Discovery
- Data Privacy Management and GDPR Automated Analysis Tools, Blockchain Technologies

This research established foundational security and privacy analysis for IoT, integrating theoretical and practical computer science research to address challenges in security, intelligence, and software usability, extending a modeling language framework.

### **University of Brighton – BSc Hons Computer Science**

Brighton, United Kingdom 2015 - 2018

- Three years practice of **Java** with the use of **Model-View-Controller** pattern, **Inheritance** and the different **data structures** such as Arrays, Lists, Stacks and Queues.
- Two-year **Databases** practice in **SQL** as well as data pipelines through Java programs
- One-year **Mobile Application Development** practice (NotJustAGuide Mobile App)

My undergraduate final year project consisted of the successful development of a mobile application for an **Intelligent Personal Assistant (Avra Mobile App)**. This required a sound understanding of various aspects of Artificial Intelligence (AI), including Machine Learning and Natural Language Processing. (Final Year Project Grade: First Class)

**Classification: Second Class Honours (Upper Division)**
